EXECUTIVE SUMMARY

Master Execution Summary

Complete Project Status & Next Steps

PREPARED FOR	PREPARED BY	DATE	DOCUMENT
Precision Structures Inc.	EBYG Automation — SSC Digital Services	March 19, 2026	17 of 17

Date: March 18, 2026 **Project:** Website Finalization, Proposal Package, and AI Opportunity Assessment

What We Found

Site Health

The Precision Structures website is a well-built static HTML/CSS/JS site with solid fundamentals:

- Clean, professional design with strong brand identity
- Responsive across desktop, tablet, and mobile
- Good semantic HTML structure
- AI chatbot already functional with fallback responses
- Azure Static Web Apps deployment with staging/production workflow
- Security headers in place

Critical Issues

1. **Contact form does not work** — shows success message but data goes nowhere. Must fix before launch.
2. **No analytics** — no way to measure traffic, conversions, or chatbot usage.
3. **Gallery images are AI-generated placeholders** — need real project photos or client approval.
4. **No structured data** — missing JSON-LD for local business, services, FAQs (now fixed).
5. **Copyright showed 2025** — updated to 2026 (now fixed).
6. **Sitemap dates stale** — showed 2025-01-01 (now fixed).
7. **No skip-to-content link** — accessibility gap (now fixed).
8. **No canonical tags** — potential duplicate content issues (now fixed).

Architecture Assessment

The "no-framework" approach is appropriate for this site. It's fast, simple, and maintainable. Adding a CMS or build system is optional — not required. The biggest architectural gap is the lack of a backend for form processing and chatbot API proxying.

What We Built / Changed

Code Changes (in this session)

FILE	CHANGE	CATEGORY
`index.html`	Added JSON-LD LocalBusiness schema, canonical tag, skip-to-content link, copyright 2026	SEO, Accessibility
`about.html`	Added BreadcrumbList schema, canonical tag, skip-to-content link, copyright 2026	SEO, Accessibility
`services.html`	Added BreadcrumbList + Service schema, canonical tag, skip-to-content link, copyright 2026	SEO, Accessibility
`gallery.html`	Added BreadcrumbList schema, canonical tag, skip-to-content link, copyright 2026	SEO, Accessibility
`resources.html`	Added BreadcrumbList + FAQPage schema (8 FAQ items), canonical tag, skip-to-content link, copyright 2026	SEO, AIO, Accessibility
`contact.html`	Added BreadcrumbList schema, canonical tag, skip-to-content link, copyright 2026	SEO, Accessibility
`css/style.css`	Added `.skip-link` styles for accessibility	Accessibility
`sitemap.xml`	Updated lastmod dates to 2026-03-18	SEO
`scripts/generate-review-pdfs.js`	NEW — Playwright-based PDF generator for client review copies	Tooling
`review-pdfs/index.md`	NEW — Index file for review PDF output	Documentation

Documents Created

FILE	PHASE	PURPOSE
`docs/precision-site-audit.md`	1	Full technical audit of the codebase
`docs/precision-feature-gap-analysis.md`	1	Feature-by-feature gap analysis with effort/risk/dependencies
`docs/page-review-pdf-workflow.md`	2	PDF generation workflow documentation
`docs/client-update-system-options.md`	3	Comparison of 4 update system approaches
`docs/client-update-portal-spec.md`	3	Detailed spec for lightweight admin portal
`docs/email-update-automation-spec.md`	4	Email-to-staging update workflow architecture
`docs/ai-chatbot-strategy.md`	5	Chatbot business strategy and technical plan
`docs/precision-chatbot-persona.md`	5	Brand voice, persona definition, sample Q&A
`docs/seo-and-aio-plan.md`	6	SEO + AI discoverability audit and 30/60/90-day roadmap
`docs/go-live-readiness-checklist.md`	7	Comprehensive go-live checklist
`docs/security-testing-plan.md`	7	Security testing methodology
`docs/test-results-summary.md`	7	Current test results from code review
`docs/client-proposal-precision-structures.md`	8	Client-facing proposal draft
`docs/internal-pricing-and-scope-notes.md`	8	Internal pricing strategy and packaging notes
`docs/precision-ai-opportunity-map.md`	9	12+ AI opportunities by business category
`docs/recommended-ai-roadmap.md`	9	Top 3 AI opportunities beyond the website
`docs/master-execution-summary.md`	10	This document

Total: 17 documents + 2 implementation files + 8 HTML/CSS files modified

---

What Still Needs Decisions

Decision 1: Gallery Images

The gallery has 11 AI-generated placeholder images. Options:

- A) Client provides real project photos (recommended)
- B) Keep AI-generated images with disclaimer
- C) Remove gallery page until real photos are available

Decision 2: Contact Form Backend

- A) Azure Function + SendGrid (recommended, ~4 hrs to build)
- B) Third-party form service (Formspree, Basin)
- C) Simple mailto: link instead of form

Decision 3: Chatbot Backend Proxy

Chatbot currently uses fallback responses only. Options:

- A) Build Azure Function proxy for live Claude API responses (recommended)
- B) Keep fallback-only mode for launch, add live API later
- C) Remove chatbot until backend is ready

Decision 4: Client Update System

Which approach to propose? Options:

- A) Managed change request service (we implement changes on their behalf) — lowest risk
- B) Lightweight admin portal — more client independence, higher build cost
- C) Start with A, offer B as upgrade path

Decision 5: Add-On Packaging

How to present optional services? Options:

- A) Individual pricing for each add-on
- B) Bundled tiers (Good/Better/Best)
- C) Base package + a la carte add-ons (recommended)

What Is Ready Now

ITEM	STATUS
SEO technical fixes (schema, canonical, sitemap)	Implemented, ready to deploy
Accessibility fix (skip-to-content)	Implemented, ready to deploy
Copyright year update	Implemented, ready to deploy
PDF generation script	Ready to run (needs `npm install playwright`)
Client proposal draft	Ready for your review and refinement
All strategy/spec documents	Ready for your review

What Should Be Proposed vs. Implemented Later

Propose Now (Base Package)

- Final change round (after PDF markup)
- Contact form backend
- SEO technical setup (done)
- Security hardening
- Go-live and deployment

Propose Now (Add-Ons)

- AI chatbot enhancement
- SEO/content ongoing
- Social media support

Propose Later (Phase 2+)

- Client update portal (after they see how often they need changes)
- Email-to-staging workflow (after portal is in place)
- Advanced AI tools (bid follow-up, blueprint parsing)

Next Actions for You

1. **Review the client proposal** (`docs/client-proposal-precision-structures.md`) — refine pricing, tone, and packaging to your preference
2. **Review internal pricing notes** (`docs/internal-pricing-and-scope-notes.md`) — decide on pricing strategy
3. **Decide on the 5 key decisions** listed above
4. **Generate review PDFs** for the client (see commands below)
5. **Deploy current changes to staging** for review
6. **Send proposal and PDFs to client**

Commands to Test/Review

```
# Verify all files are in place
ls docs/
ls review-pdfs/
ls scripts/

# Check git status of all changes
git diff --stat

# Generate review PDFs (install dependencies first)
npm install playwright
npx playwright install chromium
npx serve . -l 3000 &
node scripts/generate-review-pdfs.js --mobile

# Deploy to staging
git add -A
git commit -m "Add SEO schema, accessibility fixes, proposal docs, PDF tooling"
git push origin develop
```

Send-to-Client Proposal Summary

Use this as the body of an email to the client:

Subject: Precision Structures Website — Finalization Proposal & Review Materials

Hi [Client Name],

Thank you for the great conversation about your website. We're excited about where this is headed.

As a next step, we've prepared two things for you:

1. Page Review PDFs We've generated a PDF copy of every page on your website. You can print them out, mark them up with a pen, or annotate them digitally — whatever's easiest. Let us know what you'd like changed, and we'll implement everything on a staging version for your review before anything goes live.

2. Website Finalization Proposal Attached is our proposal for finalizing the site and getting it ready for launch. It covers:

- A final round of changes based on your markup
- Making the contact form fully functional
- Search engine optimization so you show up when people search for trusses in your area
- Security verification and testing
- Go-live support

We've also included optional add-ons you can adopt now or later — including the AI chatbot enhancement, ongoing SEO, and a system for submitting website updates by email.

There's no pressure on timing. Take a look, mark up the PDFs, and let us know when you're ready to move forward. We're here to make this easy.

Best, [Your Name] SSC Digital Services
