Top 3 Priorities Beyond the Website

PREPARED FOR	PREPARED BY	DATE	DOCUMENT
Precision Structures Inc.	EBYG Automation — SSC Digital Services	March 19, 2026	16 of 17

Prepared for: Precision Structures Inc. **Date:** March 18, 2026 **Prepared by:** Silver Stag Creative

The Big Picture

The website chatbot is already underway. That's the right first move — it faces the customer, it solves a real problem, and it demonstrates what AI can actually do for the business.

But the chatbot is just the starting point. Below are the three AI initiatives we recommend tackling next, in priority order. Each one was chosen because it meets three criteria:

1. **It solves a problem the team already feels.** No one needs to be convinced it's a problem.
2. **It's low-to-medium effort.** No massive integration projects. No six-month timelines.
3. **It strengthens customer relationships.** Every tool here makes Precision easier and better to work with.

Recommendation #1: AI-Drafted Customer Emails & Follow-Ups

Why This Matters

Every day, the Precision team writes emails: bid responses, follow-ups, delivery confirmations, answers to customer questions. Each one takes time. When things get busy, emails get delayed — or they go out shorter and less polished than intended. That's not a character flaw; it's a capacity problem.

AI-drafted emails solve this by doing the heavy lifting on the first draft. The system pulls in project context (customer name, project details, bid amount, timeline) and produces a professional, ready-to-send email. Staff reviews it, tweaks anything that needs a personal touch, and hits send.

The result: faster responses, more consistent tone, and significant time savings across the team — without changing how anyone works.

Why It Fits the Relationship Approach

Precision's strength is relationships. Contractors come back because they trust the people. AI-drafted emails don't replace that — they protect it. When responses go out faster and read more professionally, the relationship gets stronger. The customer feels taken care of. The team feels less buried.

Why Propose This Now

This is the lowest-hanging fruit on the entire opportunity map. It requires no complex integrations, no new software systems, and no change in workflow. It works with the email tools the team already uses. It builds confidence in AI as a practical tool — not a threat — which matters before proposing anything more ambitious.

Implementation Approach

- **Tool:** Claude API integrated into a simple internal interface (web-based or Outlook plugin)
- **How it works:** Select a template type (bid response, follow-up, delivery confirmation, general), input or auto-pull project context, generate draft, review, send
- **Templates to start:** Bid response, bid follow-up (3-day, 7-day, 14-day), delivery confirmation, project status update, general inquiry response
- **Human stays in control:** Every email is reviewed and approved before sending. AI drafts; people decide.

Investment & Timeline

Estimated Investment	$2,000 - $4,000 for initial setup and template development
Ongoing Cost	$50 - $150/month (API usage based on volume)
Timeline to Pilot	2-3 weeks from approval
Expected ROI Timeline	Immediate — time savings are felt from day one

Recommended Pilot

Start with the two most common email types (likely bid responses and follow-ups). Run them for two weeks. Measure time saved per email and whether response times improve. If the team likes it, expand to all templates.

Recommendation #2: AI-Generated Social Media Content

Why This Matters

Precision Structures has Facebook and Instagram accounts. They probably don't post consistently — because who has time? But in the contractor world, an active social media presence does real work. It builds local credibility. It shows you're busy (which signals quality). It keeps you top-of-mind when someone needs trusses.

The problem isn't that the team doesn't know social media matters. The problem is that creating content takes time and creative energy that's already committed elsewhere. AI solves this by generating a month's worth of content in an hour: captions, post ideas, hashtags, and suggestions for what to photograph on job sites.

Why It Fits the Relationship Approach

Social media, done well, is relationship-building at scale. A photo of a completed truss package with a caption about the project tells a story. A behind-the-scenes shot of the production floor shows craftsmanship. A post congratulating a contractor on a project completion strengthens that partnership publicly. None of this requires a marketing

Why Propose This Now

The new website is launching. That's a momentum moment. Social media drives traffic to the site, and the site converts that traffic into leads. The chatbot catches those leads. It's a complete funnel — but only if the top of the funnel (social media and search) is active. Proposing social media content now rides the wave of the website launch.

Implementation Approach

- **Tool:** Claude API or ChatGPT for content generation, paired with a simple content calendar (Google Sheet or similar)
- **How it works:** Monthly session to generate 12-16 post drafts (3-4 per week). Team reviews, adds real photos, and schedules posts using a free tool like Meta Business Suite.
- **Content types:** Project highlights, behind-the-scenes production, team spotlights, industry tips ("5 things to know before ordering trusses"), seasonal content, community involvement
- **Human stays in control:** All content is reviewed and approved before posting. AI suggests; the team decides what represents the brand.

Investment & Timeline

Estimated Investment	$1,500 - $3,000 for initial setup, content strategy, and first month of content
Ongoing Cost	$500 - $1,000/month for monthly content generation and calendar management (or can be done in-house with AI tools for near-zero cost)
Timeline to Pilot	1-2 weeks from approval
Expected ROI Timeline	1-3 months for visible engagement growth; 3-6 months for measurable lead impact

Recommended Pilot

Generate one month of content. Post consistently for 30 days. Track engagement (likes, comments, shares, profile visits) and compare to the previous 30 days. Also track whether any new leads mention finding Precision through social media.

Recommendation #3: Smart Bid Follow-Up System

Why This Matters

Here's a number worth thinking about: if Precision sends out 20 bids a month and closes 50%, that's 10 jobs. If a

marketing spend, zero new leads needed. Over a year, those extra jobs add up to significant revenue.

The reality is that follow-up is inconsistent at every company, not just Precision. When the shop is busy, old bids get forgotten. A contractor who was "thinking about it" two weeks ago might have gone with someone who called them back. The Smart Bid Follow-Up System makes sure that never happens by tracking every outstanding bid and prompting action at the right time.

Why It Fits the Relationship Approach

Good follow-up isn't pushy — it's professional. A well-timed check-in says "we want your business and we're organized." Contractors respect that. The system doesn't automate the relationship away; it makes sure the relationship gets the attention it deserves, even when things are hectic.

Why Propose This Now

Once the new website and chatbot start generating more leads, the volume of bids will increase. More bids means more opportunities for follow-ups to slip through the cracks. Building this system before lead volume grows means Precision is ready to convert at a higher rate right when it matters most.

Implementation Approach

- **Tool:** Simple CRM-like tracking system (could be as basic as a structured spreadsheet or a lightweight CRM like HubSpot free tier) combined with AI-drafted follow-up emails
- **How it works:** Every bid gets logged with a date, customer, amount, and status. The system automatically flags bids due for follow-up (3 days, 7 days, 14 days). AI drafts a follow-up email tailored to the project and timeline. Staff reviews and sends.
- **Tracking:** Bid sent, follow-up #1, follow-up #2, won, lost, reason lost
- **Human stays in control:** All follow-ups are reviewed before sending. The system prompts action; people make the judgment calls.

Investment & Timeline

Estimated Investment	$3,000 - $6,000 for system setup, workflow design, and integration with email drafting
Ongoing Cost	$100 - $300/month (CRM tool + API usage)
Timeline to Pilot	3-4 weeks from approval
Expected ROI Timeline	1-2 months — trackable from the first additional closed bid

Recommended Pilot

Start by logging all new bids for one month. Use the AI follow-up system for half of them (the test group) and continue the current approach for the other half. Compare close rates after 60 days. This gives a clear, data-driven answer to "does this actually help?"

Combined Roadmap Timeline

MONTH	INITIATIVE	STATUS
Now	Website Chatbot	In progress (Phase 1)
Month 1	AI-Drafted Customer Emails	Pilot launch
Month 1-2	Social Media Content	First month of consistent posting
Month 2-3	Smart Bid Follow-Up System	Build and pilot
Month 3+	Evaluate results, plan Phase 2	Data-driven expansion

Total Phase 1 Investment (beyond chatbot): $6,500 - $13,000 **Total Ongoing Monthly Cost:** $650 - $1,450/month

---

Our Approach

Start small, prove value, expand.

Every AI tool should earn its place by solving a real problem — not by being novel. The recommendations above are ordered by how quickly they deliver tangible results and how easily they integrate into the way Precision already works.

We don't believe in deploying technology for its own sake. We believe in deploying technology that makes a 35-year-old family business more competitive, more responsive, and more able to do what it's always done best — build strong relationships and deliver quality trusses.

If the first tool saves time, the team will want the second one. If the second one closes more deals, the third one becomes obvious. That's how AI adoption should work: earned trust, one win at a time.

Ready to start? The AI-Drafted Customer Emails system can be piloted within three weeks of approval. Let's talk about which email templates would save the most time.
